System 10 Microwave multiplexer modules are suitable for switching $50 \Omega$ signals up to 40 GHz . Available in a choice of formats as single or dual 6-channel Multiplexer, they are suitable for constructing complex microwave switching networks and provide a range of switching configurations to suit most applications. Optional $50 \Omega$ Terminating versions may be ordered, specify -T.
A $75 \Omega$ version is available with a bandwidth of 4 GHz , this uses the Siemens $1.6 / 5.6$ style $75 \Omega$ connector.
These modules give you the highest RF \& Microwave switching performance available within a Pickering Switching System.
Applications are mainly in the Microwave region, however there are many uses in the RF spectrum where extremely low insertion loss and ultra high isolation are critical.
Model 10-785C has either 1 or 2 six channel multiplexers, this model is particularly suitable for constructing large switching networks.
