- High Isolation Low Noise 100MHz Switching Matrix
- $75 \Omega$ Version Suitable for Telecoms and High Quality Video Switching
- $120 \Omega$ Differential Version Suitable for Digital Telecoms/Data Switching
- Choice of $16 \times 4,8 \times 4$ \& $8 \times 8$ Formats with 1 or 2 Pole Switching
- Automatic Isolation Switching for Maximized Performance
- Optional Loop Through Versions for Construction of Large RF Matrices with Automatic Termination
- Built-In Switch Self Test with Fault Diagnosis to Component Level

The $8 \times 8,8 \times 4$ and $16 \times 4$ RF Matrix Modules switch frequencies beyond 100 MHz with a choice of $50 \Omega, 75 \Omega \& 120 \Omega$ versions. Suitable for high accuracy test instrumentation requiring good isolation/noise performance. Built-in switch self-test gives complete switch confidence.
System 20 High Isolation RF Matrix Modules are intended for easy construction of high performance Bidirectional matrix switching systems; modules may be easily cascaded to form matrices of almost any size.
Connections are made via industry standard BNC connectors. Isolation Switches on each module remove all unselected columns and rows from the system, maximizing both isolation and RF performance.
Full Self-Test is performed at power up and at any other time under program control. Self-Test is of particular importance in large systems where relay contact integrity is a very major consideration. In the unlikely event of relay failure the front panel will indicate a fault. The diagnosis - including the position of the suspect relay will be indicated using the DIAGNOSTIC? command.

## Applications

Main applications will be for very high quality switching where standard matrix units have inadequate RF and isolation performance, these include: high quality data acquisition (usually 2-pole with frequencies $<1 \mathrm{MHz}$ ), RF matrices (1-pole to beyond 100 MHz ), video applications ( $75 \Omega$ impedance), telecommunications ( $75 \Omega$ and $120 \Omega$ impedance) and high quality signal routing in functional ATE systems. Models 20-520-802 (16x4) and 20-525-802 (8x8) are designed specifically for digital telecommunications switching using $120 \Omega$ twisted pair cabling, and use a high density 50-pin connector.

*Please contact Pickering for alternative PXI/LXI/USB solutions

## Loop Through Expansion

A further version offering loop-through connectors for easy construction of large RF matrices is available, specify option - $L$, see schematic diagram. This can also be used for automatic termination of unselected Input/Output signals.
This option is similar to that provided for the $20-750$ matrix module $(8 x 4,1000 \mathrm{MHz})$, please refer to the $20-750$ RF Matrix Application Datasheet or contact factory for further information.

## Typical RF Matrix: $8 \times 24$

The schematic below illustrates a $75 \Omega 8 \times 24$ RF matrix, all non-selected lines are automatically terminated into $75 \Omega$ loads (added externally). Up to 30 matrix modules may be interconnected in this way, allowing very large RF matrices to be easily constructed without substantial performance loss.
Conventional RF matrix modules cannot be expanded without a very substantial loss in RF performance (especially poor insertion loss and return loss), nor can they offer automatic termination of non-selected signals.

8x24 RF Matrix -75

General Specification (All Versions)

| Maximum Voltage: | 100 V DC |
| :--- | :--- |
| Maximum Power: | $10 \mathrm{~W} \dagger \dagger$ |
| Maximum Switch Current: | 1.0 A |
| On Path Resistance: | $<500 \mathrm{~m} \Omega$ |
| Off Path Resistance: | $>10^{8} \Omega$ |
| Diff Thermal Offset (1 pole version): | $<20 \mu \mathrm{~V}$ |
| Diff Thermal Offset (2 pole version): | $<10 \mu \mathrm{~V}$ |
| Expected Life (Low Power): | $>1 \times 10^{8}$ operations |
| Expected Life (Max Power): | $>5 \times 10^{6}$ operations |
| Switching Time: | 15 ms |

$\dagger \dagger$ For all matrix modules with Loop Through option (-L) Max Power is reduced to 3 W and Max Switch Current to 0.25A.

## RF Specification-1 Pole $50 \Omega$ and $75 \Omega$ Versions

| Characteristic Impedance: | $50 \Omega$ or $75 \Omega$ |
| :--- | :--- |
| Maximum Frequency: | 200 MHz |
| Rise Time: | $<1.5 \mathrm{~ns} \dagger$ |
| Insertion Loss (<200MHz): | $<3 \mathrm{~dB} \dagger$ |
| V.S.W.R. $(<100 \mathrm{MHz}$ ): | $<1: 1.8 \dagger$ |
| Isolation (<100MHz): | $>75 \mathrm{~dB}$ |
| Crosstalk (<100MHz): | $>60 \mathrm{~dB}$ |
| Capacitance - open channel to gnd: | $<40 \mathrm{pF}$ |
| Capacitance - selected channel to | $<70 \mathrm{pF}$ |
| gnd: | $<4 \mathrm{pF}$ |
| Capacitance - open input to output: |  |

## RF Specification - 2 Pole $50 \Omega$ and $75 \Omega$ Versions

| Characteristic Impedance: | $50 \Omega$ or $75 \Omega$ |
| :--- | :--- |
| Maximum Frequency: | 100 MHz |
| Rise Time: | $<2.0 \mathrm{~ns} \dagger$ |
| Insertion Loss $\dagger<100 \mathrm{MHz}$ ): | $<3 \mathrm{~dB} \dagger$ |
| Return Loss: | $<11 \mathrm{~dB} \dagger$ |
| Isolation (<100MHz): | $>65 \mathrm{~dB}$ |
| Crosstalk (<100MHz): | $>55 \mathrm{~dB}$ |

$\dagger$ RF Performance is entirely dependant upon the combination of crosspoints currently selected, these figures are for one selected cross-point only, refer to the graphs.

## RF Specification - 120 Telecoms Versions

| Characteristic Impedance: | $120 \Omega$ |
| :--- | :--- |
| Maximum Frequency: | 50 MHz |
| Rise Time: | $<1.5 \mathrm{~ns} \dagger$ |
| Insertion Loss (<50MHz): | $<3 \mathrm{~dB}$ |
| Return Loss (<50MHz): | $<12 \mathrm{~dB}$ |
| Isolation (<50MHz): | $>50 \mathrm{~dB}$ |
| Crosstalk (<50MHz): | $>50 \mathrm{~dB}$ |

## Programming

The matrix module is very easy to program using the Intelligent IEEE-488.2/RS-232-C Interface:

| ARESET a | Open all switches on device $\mathbf{a}$ |
| :--- | :--- |
| DIAGNOSTIC? | Report any Self Test errors |
| DELAY $\mathbf{t}$ | Force a minimum delay of $\mathbf{t}$ milliseconds <br> between two instructions |
| MCLOSE $\mathbf{a , x , y}$ | Close switch at coordinates $\mathbf{x}, \mathbf{y}$ on matrix <br> $\mathbf{a}$ |
| MOPEN $\mathbf{a , \mathbf { x } , \mathbf { y }}$ | Open switch at coordinates $\mathbf{x}, \mathbf{y}$ on matrix <br> $\mathbf{a}$ |
| RESET | Open all switches on all modules |
| VIEW? a | View status of device $\mathbf{a}$ |

## Self Test

Self-Test is invoked at power on (taking around 30 seconds) and may also be operated under software control (*TST?). Self-Test pass is indicated on a front panel LED with a full pass/ fail description available using the DIAGNOSTIC? command. Self-Test comprises 3 levels:-

## 1. Logic Test

## 2. Relay Coil Test

## Connectors

- Single pole versions use BNC coaxial connectors.
- Double pole versions have a BNC connector with the outer shield isolated from chassis ground.
- $120 \Omega$ versions use a 50 -pin high density connector, additional contacts are provided for shielded twisted pair cabling.

## Mechanical Characteristics

All 20-520/522/525 model versions are housed in shielded 6U height ( 262 mm ) Eurocard modules and are 160 mm deep. Panel width is as follows:-

- All $50 \Omega$ and $75 \Omega$ versions are 2.4 Inches, except -L types.
- $50 \Omega$ and $75 \Omega$ versions with Loop Through option (-L) are 3.6 Inches.
- All $120 \Omega$ versions are 1.8 Inches.

Operating/Storage Conditions
Operating Conditions

Operating Temperature:
Humidity:
Altitude:
$0^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}$
Up to 95\% non-condensing 5000m

Storage and Transport Conditions
Storage Temperature: $\quad-20^{\circ} \mathrm{C}$ to $+75^{\circ} \mathrm{C}$ Humidity:

Up to 95\% non-condensing 15000m

## Safety \& CE Compliance

All modules are fully CE compliant and meet applicable EU directives: Low-voltage safety EN61010-1:2010, EMC Immunity EN61326-1:2013, Emissions EN55011:2009+A1:2010.

Typical RF Performance Plots for $50 \Omega$ and $75 \Omega$ Single Pole RF Matrix Modules

Curves are shown for matrix rows/columns with: 1 or 2 interconnected cross-points set. For optimum insertion loss and VSWR (reflection) performance ensure only one cross-point is set in any one row/column. Performance curves for all versions of the single pole matrix modules have similar characteristics, any differences are shown.

Typical RF Performance Plots for $50 \Omega, 75 \Omega$ and $120 \Omega$ Double Pole RF Matrix Modules
For optimum insertion loss and VSWR (reflection) performance ensure only one cross-point is set in any one row/column.
Performance curves for all versions of the double pole matrix modules have similar characteristics.

Product Order Codes

| Configuration | No. of Poles | Impedance | Connector | Part Number |
| :---: | :---: | :---: | :---: | :---: |
| $16 \times 4$ Matrix | 1 | $50 \Omega$ | Co-Ax | 20-520-521 |
|  | 2 | $50 \Omega$ | Co-Ax | 20-520-522 |
|  | 1 | $75 \Omega$ | Co-Ax | 20-520-721 |
|  | 2 | $120 \Omega$ | 50-Pin Dtype | 20-520-802 |
| 8x4 Matrix | 1 | $50 \Omega$ | Co-Ax | 20-522-521 |
|  | 2 | $50 \Omega$ | Co-Ax | 20-522-522 |
|  | 1 | $75 \Omega$ | Co-Ax | 20-522-721 |
|  | 2 | $75 \Omega$ | Co-Ax | 20-522-722 |
| 8x8 Matrix | 1 | $50 \Omega$ | Co-Ax | 20-525-521 |
|  | 2 | $50 \Omega$ | Co-Ax | 20-525-522 |
|  | 1 | $75 \Omega$ | Co-Ax | 20-525-721 |
|  | 2 | $75 \Omega$ | Co-Ax | 20-525-722 |
|  | 2 | $120 \Omega$ | 50-Pin D-type | 20-525-802 |

Loop Through Option: All of the above matrix modules are available with a loop through option, this is frequently used in the construction of large self terminating RF matrices. Please order option -L (e.g. 20-525-521-L)
Other connector styles may be available, please contact factory for further information.

## Mating Connectors \& Cabling

For connection accessories for this series of modules please refer to the 90-011DRF Cable Assemblies and 90-005D 50-pin D-type Connector Accessories data sheets where a complete list and documentation can be found for accessories, or refer to the Connection Solutions catalog.

## Product Customization

Pickering System 20 modules are designed and manufactured on our own flexible manufacturing lines, giving complete product control and enabling simple customization to meet very specific requirements.
Customization can include:

- Alternative relay types
- Mixture of relay types
- Alternative number of relays
- Different performance specifications

All customized products are given a unique part number, fully documented and may be ordered at any time in the future. Please contact your local sales office to discuss.

20-525-802 High Isolation RF Switching Module
